

Faculty Supervised DED Degree Completion Project

Proposal for Fall 2026 | Ronald Lethcoe

Request. I am asking DED faculty and the dean to consider a one-quarter, instructor-supervised project through which I can demonstrate the remaining crosswalk outcomes without attending several full courses. Faculty would approve the required evidence, assessment methods, evaluators, and credit or enrollment mechanism before production begins.

127 outcomes mapped	98 with selected evidence	29 included in the completion plan
------------------------	------------------------------	---------------------------------------

Current standing

The crosswalk was completed with DED faculty before this portfolio was built. The portfolio now maps surviving coursework and professional work to 127 outcomes across 24 active course areas. It is an evidence record for faculty review, not a credit determination.

Central project

CPTC Campus Quest would be a top-down 2D campus exploration game for prospective students. A first-quarter vertical slice would include a campus hub, three to five program areas, program conversations, short interactive checks, collectible program artifacts, and progress tracking. The content structure would allow more programs to be added later. Simon could serve as the guide character only with Marketing and Communications approval.

Evidence produced

- Playable build, source files, design documentation, storyboards, character and environment work, user testing, and accessibility review
- Companion animation, visual effects, audio, 3D, and photography demonstrations where the game alone does not address an outcome
- Version history, milestone log, task tracking, faculty feedback, AI-use and asset-provenance record, and outcome-to-evidence map
- Final live demonstration, portfolio presentation, and professional demo reel

Supervision and assessment

- Faculty approve an outcome assessment contract before production begins
- One scheduled hour each week for critique, skill demonstration, and milestone approval
- Faculty evaluate each artifact against the exact course outcome and identify any additional assessment needed
- The college applies the approved credit, enrollment, and graduation process after assessment

College use

The project could support the college goals of Access, Community of Care, Retention and Completion, and Employment by helping prospective students understand programs and career paths through an interactive experience. Any public or institutional use would require separate content, accessibility, brand, rights, privacy, and technical review.

Decision requested

Are DED faculty and the dean willing to help define a one-quarter assessment plan for the remaining outcomes? If so, the first step would be to confirm the eligible credit or enrollment mechanisms, assign evaluators, and approve a realistic vertical-slice scope.
